

Driving Ahead a Digital-based Integrated Healthcare System

Ayushman Bharat Digital Mission

The Ayushman Bharat Digital Mission (ABDM) launched in 2021 by the National Health Authority (NHA), Government of India aims to develop an integrated healthcare infrastructure and transform the health ecosystem for the people living in our country.

The ABDM pilot started in 2020 in the six Union Territories viz. Ladakh, Chandigarh, Daman & Diu and Dadra & Nagar Haveli, Lakshadweep, Puducherry, and Andaman & Nicobar Islands and thereafter expanded in all the States and Union Territories.

WHP works with the National Health Authority to on-board private-sector doctors, clinics, and small hospitals on ABDM in Amritsar, Patiala- Punjab and Patna in Bihar. The process is focused on conducting a mapping exercise of all private providers; sensitizing them on the governments mission; registering doctors and clinics/hospitals on ABDM's Healthcare Professionals Registry and Health Facility Registry, respectively, and deploying the ABDM-enabled hospital management information system (HMIS) for generating electronic health records that are linked to patients' Ayushman Bharat Health Account (ABHA), which is a unique health account number for Indian citizens.

The team provides hands on support with onboarding of healthcare professionals and facilities onto the ABDM ecosystem. Build capacities of the engaged healthcare professionals and acts as a liaison with the digital health solution provider for any troubleshooting. Follow-up visits for any kind of assistance is also carried out for the doctors and their staff members.

Key Activities by World Health Partners

WHP's role is aligned to bridge the gap between technology and healthcare by:

- Carrying out on-ground mapping exercise to run the Microsite
- Engaging directly with healthcare professionals and make them aware about ABDM and its benefits
- Providing hands-on support for on-boarding of healthcare professionals and facilities onto the ABDM ecosystem
- Conducting capacity building and IEC activities required for target healthcare professionals
- Engaging with digital health solution providers and their technical team for troubleshoot

WHP began working on the project from October 13, 2023 and since then has mapped 1,370 health facilities, 468 labs and 1,509 providers across Patna, Patiala and Amritsar.

1,370

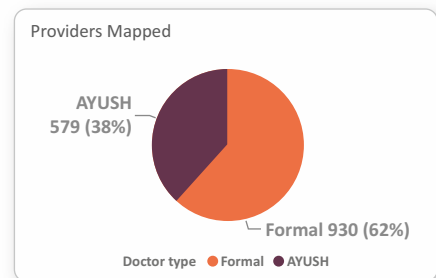

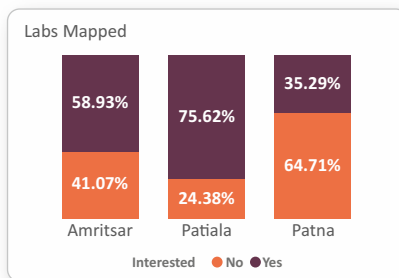

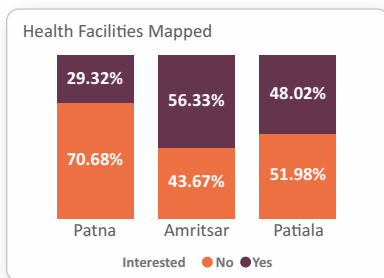

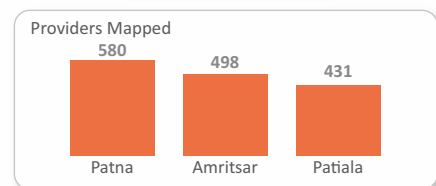

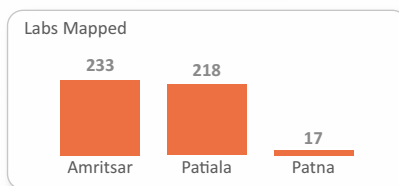

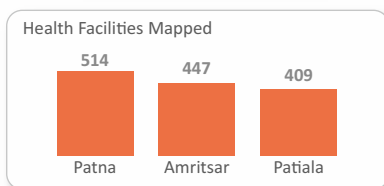

Healthcare Facilities Mapped

468

Labs Mapped

1,509

Providers Mapped

As part of Ayushman Bharat Digital Mission (ABDM), World Health Partners is creating a comprehensive repository of all the public and private health facilities across different systems of medicine
